Scott –

We would be forever in your debt if you would add the following:

- pH
- Conductivity
- ORP
- DO
- Ammonia
- Hardness/alkalinity (CaCO₃)
- Chloride
- COD
- Nitrate/Nitride
- Sulfate/Sulfide
- Phosphate
- TOC

Thank you,

Erin

Lee,

Thank you for the TDEC comments on the draft RI/FS and Proposed Plan. As we discussed today, we are committed to working with TDEC in conducting an aquifer buffering study during the Remedial Design phase.

Also, as we discussed, SESD will be conducting groundwater sampling of the existing monitoring well network and any surface water, if present, from around the cap, during the week of July 13th. At this time, they are planning to analyze for total metals.

If you think of additional analysis that may be beneficial in determining aquifer characteristics, please let us know.

Thank you,

Scott
